

"The most effective way to reduce wrinkles is to restore lost collagen"

THE PROBLEM

Every day, your skin's collagen breaks down into fragments called "peptides". These peptides signal your skin cells to produce new collagen. By age 40, this process decreases by over 50%.

THE SOLUTION

Peptide-9 Remodeling Serum™ recovers this loss by applying nine bio-identical peptides to your skin. These peptides signal your skin to produce more collagen naturally. The result is firm and smooth skin - features we associate with a vibrant, youthful look.

Peptide-9 Remodeling Serum™ has 9 Active Peptides for Clinically Proven Results

Laboratory results based on individual peptide tests

350% improvement in wrinkles over 84 days

63% maximum wrinkle reduction in 28 days

47% maximum reduction in wrinkle depth

Margo C. Age 54 - After 73 Days

Multiple Peptides for Maximum Results

3 Signal Peptides
Matrixyl™ 3000, SYN®-COLL-1 and 2
Smooth Away Wrinkles

Every day, your skin breaks down collagen into fragments called "peptides". These peptides signal your cells to produce new skin. By age 40, this process reduces by over 50%. "Signal" peptides recover this loss by stimulating collagen production.

3 "Neuro" Peptides
Argireline®, Leuphasyl®, SNAP-8™
Reduce Frown Lines

Facial expressions cause wrinkles known as frown lines. "Neuro" peptides lessen the nerve signals to your facial muscles. This decreases deep frown expressions.

1 Firming Peptide
Peptamide™ 6
Tighten Skin

Elastin gives your skin its resilience and spring. Similar to collagen, elastin production is reduced as we age. Firming peptides recover this loss by stimulating elastin production.

1 Whitening Peptide
Melanostatine®5
Diminish Dark Circles

Sunlight causes our skin to produce melanin. This protects our skin and gives us our summer tan. It also causes uneven skin tone and age spots. Whitening peptides evens your skin tone by reducing melanin production.

1 RCS Peptide
Aldene®
Repair Damaged Skin

Chemicals, sunlight, and air pollutants cause free radicals in our skin which contribute to aging. RCS peptides reduce these damaging effects by helping your skin to repair itself.
